

QUALITYRECORDS

QualityRecords is an efficient quality management system leading to considerable time savings for operators and providing Quality Managers with a wide range of process control and monitoring tools.

Features

Documentation Management

Computerisation of both the drafting, maintenance, revision and controlled distribution of documents. In particular, document creation and consultation can be structured on several levels according to the company organisation: operational unit, departmental and corporate.

Management of Non-Conformities, Complaints, Preventive and Corrective Actions Equipment

Scheduling of calibrations, adjustments and preventive maintenance of equipment with description of procedures and management of schedules is managed.

Suppliers

Supplier qualification by highlighting any non-conformities arising from the products/ services supplied.

Audits and Management Review

Recording and planning of inspections and management reviews with related schedules.

Personnel and Training Courses

Archiving of personnel records and also recording and planning of training courses.

Meetings

Recording and planning of meetings with the possibility of sending communication via email.

Reports and Statistics

Comprehensive system of statistics to extract relevant information on the type of problems detected.

Architecture

- Web solution
- Db: SQL, Oracle
- Cloud or on premise
- Prerequisite: Word licence for automatic updating of documents under revision

Compliance

QualityRecords ensures, with maximum efficiency, the correct and controlled management of the quality system in compliance with the requirements of the standards for certification and accreditation of healthcare facilities.
